

## Detectable and Non-Detectable Warning Tapes

Used for Locating Non-Metallic Pipes Buried Underground

Tape consists of an aluminum core encased in plastic. Stocked in 1,000 foot rolls in standard industry colors. For installations 30" or shallower, 2" wide tape should be used. For deeper installations, 3" tape should be used. Use electronic pipe/cable locators for best results (as opposed to valve box or metal locators).
