Requirements For OD Tape Artwork

When you send us your logo file along with the contact information you would like on your label, we could design a custom label for you. We will always send a proof for you to review and approve before we send the label design to the print shop. If you want changes made after you review the proof we could make them for you. You could also send us the final artwork file for your label, but in this instance you are responsible for making any changes or corrections to the art and for sending us the revision.

There are some requirements for the OD Tape artwork that should be followed to ensure the best possible end product. These requirements are a result of the nature of the print media, which are more demanding than those of website art requirements. We apologize for any inconvenience this may cause, but we are confident that you will be happy with the quality of your labels if you adhere to the following requirements.

- 1 Logo must be at least 2" wide if your logo is horizontal, or 2" tall if logo vertical**
- 2 Logo must be at least 300 "DPI" (dots per inch) or larger.**
- 3 Logo can be created as the following image formats: EPS, AI, TIF, JPG & (sometimes PDF)**

EPS or AI Images

These are the best formats to send your logo files. If your artwork is created as a "vector image" in a common illustration application such as Adobe Illustrator, you will have a crisp, clear image on your labels. However, if you place a non-vector image in Adobe Illustrator, it won't make a difference. This only applies to logo images created within the illustration software itself.

We have experienced problems receiving these file formats via our email system, so we are requesting that you send to us by **WeTransfer**.

Sending Files Via WeTransfer:

1. Go to <https://wetransfer.com>
2. Click "no thanks" if it asks you to create an account
3. Then in the next window either: (a) click the file on your desktop and drag it, or (b) click on "or select a folder"
4. Click on "Get transfer link"
5. Click the big blue button on the bottom "Get a link"
6. Wait for the link to completely load
7. When finished loading, it gives you a link address, which is what you send to us

TIF Images

Images created in photo software such as Adobe Photoshop are acceptable, as long as they are 300 DPI or larger at the size that will be printed (2" tall or 2" wide, as detailed above). Please note that all logos for use on the labels are converted to CMYK. This changes the appearance of several colors that were sent to us in RGB format. For this reason, you should convert all files to CMYK before you send them to us so you are aware of how all the colors will appear.

JPG Images

These files are acceptable as long as they are 300 DPI or larger. However, JPG images taken from your website will not work because they are commonly created at a lower image resolution than we require. If you are unsure if your JPG file is usable, please discuss with your Webmaster or Marketing Department about the image's size; they may have a higher resolution image to send us.

PDF Files

There are times that we could accept a PDF File, but as with all the other formats we require that the image that is placed into your PDF file is 300 DPI or larger, or a vector file. Also it is important that the PDF you send is created at the "Press Quality" setting. If you are unsure of these details, we ask that you send your file as one of the other formats if possible.
