*as a **Master Distributor** of*
V-BIO® ENHANCED POLYETHYLENE

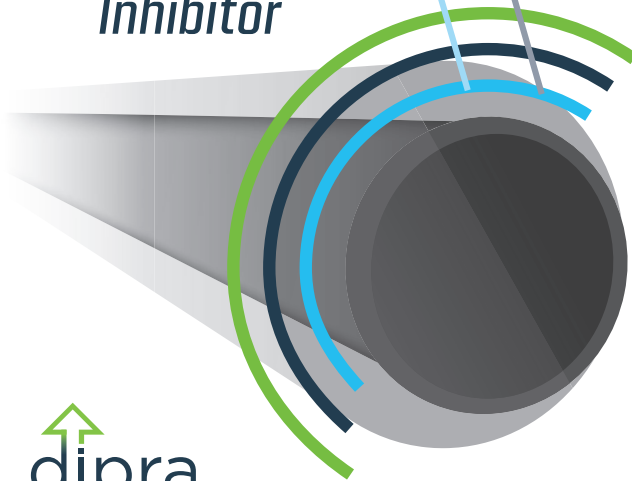

DIPRA's V-Bio® Enhanced Polyethylene with its proprietary blend of anti-microbial and volatile corrosion inhibitor enhancements is now available from Trumbull. For the best protection for your ductile iron pipe, contact Trumbull for your V-Bio® Enhanced Polyethylene Encasement.

**IN-STOCK
NOW!**

V-Bio® Enhanced Polyethylene Encasement

Anti-Microbial

*Corrosion
Inhibitor*

V-Bio® is a registered trademark of the Ductile Iron Pipe Research Association.

Meets all requirements of the American National Standards Institute and the American Water Works Association (ANSI/AWWA C105/A21.5) standard for polyethylene encasement.

V-Bio® Polyethylene is a minimum 8-Mil co-extruded linear low-density polyethylene film infused with additives that enhance ductile iron pipe's ability to provide the long service life that is the benchmark of ductile iron pipe.

V-Bio® Enhanced Polyethylene Encasement is an innovative product from DIPRA that expands on the success of traditional polyethylene encasement. The V-Bio® film is infused with a corrosion inhibitor and an anti-microbial additive to actively control external corrosion, helping ensure the long service life utilities have come to expect from ductile iron pipe, even in the most corrosive environments.
